

Eloxa prima

Metal care

Features

Eloxa prima is a ready-to-use acid- and alkali-free cleaner, especially designed for removing sticking dirt from metal surfaces. It leaves a protective film which does not harden even after a long period of time. Even repeated applications do not lead to an excessive accumulation of protective layers. Surfaces treated with Eloxa prima should exclusively be maintained with Eloxa prima.

Ingredients (according to 648/2004/EC)

Wax oil, nonionic surfactants < 5%, aliphatic hydrocarbons 15-30%, fragrances (Limonene).

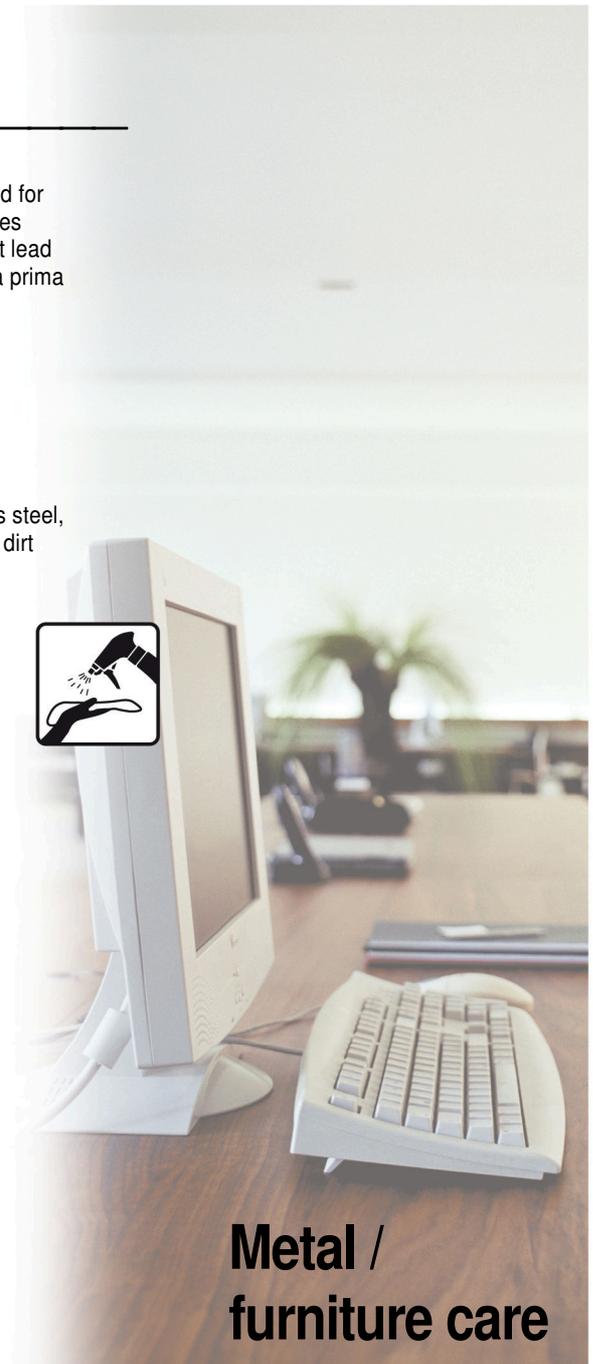

Application

Suitable for cleaning and maintaining indoor metal surfaces, made of stainless steel, aluminium or anodised aluminium. Effortlessly removes fingerprints and other dirt from metal surfaces.

Directions

Routine cleaning (surface cleaning):

Spray sparingly onto a dry cloth and then wipe the metal surface.
